Simple solutions to keep you moving

Welcome to LMS

LMS empowers your package distribution team to use less IT equipment and resources which is cost effective and efficient.

LMS enables your operation to become virtually paperless which is more secure, economical and environmentally responsible.

LMS enables logistics professionals to manage the essential elements of a modern package distribution operation more effectively via the following features:

- Multiple location and distribution customer management
- User and feature access control
- Shipment route and destination control
- Delivery personnel management
- Commodity type menus
- Customer ASN (advanced shipment notification) file management
- Simple receiving process for packages with or without existing barcodes.
- Your choice of electronic or paper route manifesting
- POD management and signature capture
- Shipment exception tracking and reporting
- Flexible reporting and document imaging
- Web browser based thin client (internet or intranet)

Reasons For LMS

LMS is ECONOMICAL

Compared to other package distribution systems, LMS is the most cost efficient to purchase, own, and maintain. For a manageable setup and monthly subscription fee, your operation will be up and running quickly. All of the costs associated with traditional systems like file servers, licensing, support and maintenance are included in the LMS monthly subscription.

LMS is FLEXIBLE & CUSTOM

We will make changes and adjustments to the basic LMS features to ensure you have a solution that works for your operation at no added cost and with no questions asked.

LMS is MANAGED, SECURE & RELIABLE

We have partnered with **XO Communications**(www.xo.com) for all of our network and data management needs. LMS resides in an XO certified data center within the heart of the Chicago Financial District on a 128bit SSL encrypted network.

LMS is RESPONSIBLE

Making the decision to implement LMS is environmentally responsible as your operation will become more paperless and utilize our server resources instead of purchasing your own.

Benefits of a Web Based System Managed in a Certified Data Center

Stellar Security and Business Continuity

In the case of a disaster or power outage, your system will be available and your data will be secure in our certified data center.

Cost Effective

- No server hardware or software needs to be installed at your site because web based solutions only require a web browser and internet connection.
- Internet technology is universal and increasingly more secure making access to your system from anywhere on any PC equipment economical and safe.

Time Efficient

- Staff can learn and use web based software more quickly because they are already familiar with similar technology from using the internet.
- Lost staff time due to software problems is reduced because issues can be identified and fixed remotely by our experienced team.
- Web based systems allow your management team to be better connected whether in or out of the office.
- Web based systems benefit from the constantly evolving resource of web based technology solutions.

Implementation & Customer Service

Implementation & Training

Precision staff will work with your operation on implementing all facets of LMS from data conversion to LAN configuration. We will get you up and running on LMS quickly and professionally.

Training your team on LMS is facilitated through our on-site implementation professionals, training manuals, Camtasia movies within LMS and web seminars.

Customer Service & Support

At Precision, next to security, there is nothing more important than Customer Service and Support.

In order to ensure we are always responding properly to your needs, you will be assigned to a single member of our support staff. That Precision staff member will be on call and available 24/7/365 and will always be familiar with your account history.

Whether you are calling us for support or just a simple question, you will always speak with someone familiar with your account and capable of assisting you.

We promise to respond immediately to your needs.

Simple solutions to keep you moving

History of LMS

LMS originally was designed for the purpose of managing the distribution process within large mailrooms. The original version has a long history of being a key resource to companies in several industries such as:

- Banking
- Financial Print
- Messenger Couriers
- Mailroom Management
- Facility Logistics

Over the past several years, LMS has been improved and upgraded. Our web-based solution is enabling larger and more remote facilities to operate a full featured package distribution system more efficiently and at a lower cost than other facilities.

Because LMS is web-based, it enables companies to manage and view their data anywhere, anytime with low-cost PC hardware and a basic connection to the internet.

Companies can now get distribution processing operations up and running in new locations rapidly and economically, while providing the management team and distribution customers real-time access of data from anywhere a basic internet connection can be obtained.
